The ABO blood groups in humans are expressed as the I A, I B, and i alleles. The I A allele encodes the A blood group antigen, I B encodes B, and i encodes O. Both A and B are dominant to O. If a heterozygous blood type A parent (I A I i) and a heterozygous blood type B parent (I B I i) mate, one quarter of their offspring are expected to have the AB blood type (I A I B) in which both antigens are ...
