The building block of all living things A cell carries out all chemical activities needed to sustain life. Phospholipids have polar heads and nonpolar tails. Molecules have to get through both to leave/enter the cell. Since most molecules do not have both polar and nonpolar features, they cannot pass through. Histology Guide Histology is the study of the microanatomy of cells, tissues, and organs as seen through a microscope. It examines the correlation between structure and function. Histology Guide teaches the visual art of recognizing the structure of cells and tissues and understanding how this is determined by their function.

Basic Tissue Study Guide

Just as knowing the structure and function of cells helps you in your study of tissues, knowledge of tissues will help you understand how organs function. The epithelial and connective tissues are discussed in detail in this chapter. Muscle and nervous tissues will be discussed only briefly in this chapter. Embryonic Origin of Tissues

Identify and Describe the Function and Interdependence of Organs and Tissues There are five basic levels of organization in living things: cells, tissues, organs, organ systems, and organisms. Cells combine to form tissues, tissues combine to form organs, organs work together in organ systems, and organisms are made of all the lower levels.

Cells Guide - 7TH GRADE SCIENCE

A tissue is a group of cells, in close proximity, organized to perform one or more specific functions. There are four basic tissue types defined by their morphology and function: epithelial tissue, connective tissue, muscle tissue, and nervous tissue.
