If you were using a dichotomous key to identify your shell, you would go through a series of 'yes' or 'no' questions about the characteristics of the shell. Depending on the answer to the question, you'd be guided to another question. When all the questions have been answered you'll arrive at the identity of the unknown shell.

ACTIVITY ONE: CLASSIFICATION WITH A DICHOTOMOUS KEY

dichotomous key is a tool used by biologists to identify organisms in a group through a process of answering yes or no questions about the organism. Dichotomous means 'divided into two parts', as each question about an organism has two choices. There are dichotomous keys to identify animals, insects, plants and many other things.

Animal Classification Using a dichotomous key

Students and professionals use the dichotomous key to identify and classify objects (i.e. people, animals, plants, bacteria, etc.) into specific categories based on their characteristics. It's the most commonly used form of classification or type of identification key used in biology as it simplifies identifying unknown organisms.
