Code refactoring is "a disciplined way to restructure code", undertaken in order to improve some of the nonfunctional attributes of the software. Typically, this is done by applying series of "refactorings", each of which is a (usually) tiny change in a computer program's source code that does not modify its functional requirements.Advantages include improved code readability and reduced ...

Object-oriented is a way to write granular objects which have a single purpose. Aspect Oriented Programming is to segregate the code in such a manner that various objects carry the main tasks, and the subsidiary tasks are carried by independent objects. 42) Why using catch (exception) is always a bad idea? It is a bad idea because:
