Genetics Pedigree Lab Introduction: Another way to present the results of a breeding or cross between parental generations to form phenotypic and genotypic progeny is through pedigree construction and analysis. A pedigree is used when few individuals and many generations are involved - this is often the case with human genetic data.

(above) can be used to help analyze pedigrees. For each pedigree below, tell if the trait can be autosomal dominant, autosomal recessive, and X-linked recessive. If the pedigree cannot fit a mode of inheritance, tell why. Record your answers in the table on the next page.

PEDIGREE ANALYSIS EXERCISE ANSWER SHEET

ANALYSIS OF HUMAN PEDIGREES Part One - Mode of Inheritance The first thing a geneticist wants to know when examining a human pedigree is the mode of Inheritance of the trait under study. This involves first deciding whether the trait results from a dominant allele or from a recessive allele, and then whether the responsible gene is autosomal or X-linked.

Constructing a Pedigree Introduction A
pedigree is a special chart or family tree
that uses a particular set of standardized
symbols. Pedigrees are used to show the
history of inherited traits through a
family. In a pedigree, males are
represented by squares and females by
circles. An individual who exhibits the
trait in question, ... Continue reading
